

Jayakrishnan C. Prakash

Senior Director, Security Operations · San Francisco Bay Area, CA

Security operations leader with 20 years of experience owning enterprise-scale detection, incident response, and security programs — known for measurable outcomes and building programs from the ground up.

[LinkedIn Profile](#)

Professional Summary

Jayakrishnan is a dedicated security operations leader currently at a Global Consumer & Enterprise Networking Company, reporting directly to the CIO and Head of Security. He holds full program authority across a **7,000-asset hybrid environment**, a **15-person internal team**, and a vendor ecosystem spanning managed SOC operations, endpoint/identity/cloud detection and response, and security tooling services.

His track record is defined by measurable outcomes: **85%+ MITRE ATT&CK coverage**, MTDD reduced from 24 hours to under 4 hours, M&A due diligence across multiple acquisitions, and one of the first enterprise AI security governance frameworks covering **20+ active tools**. He brings deep expertise across detection engineering, XDR, Zero Trust, cloud security, GRC, and third-party risk.

With 20 years of hands-on leadership — from building SOC's from scratch to managing \$1.5M tooling budgets — Jay bridges the gap between technical execution and executive strategy, consistently translating security operations into business-aligned outcomes.

Career Highlights

- 85%+ MITRE ATT&CK coverage achieved
- MTDD cut from 24h → under 4h
- MTTR cut from 8h → under 3h
- 200+ detection rules authored
- 500+ vendor risk assessments/year
- AI governance framework: 20+ tools
- M&A due diligence: 4–6 acquisitions
- 20 years of security leadership

Senior Director, Security Operations

 ULTRAVIOLET CYBER · SEP 2019 – PRESENT

As the dedicated security operations leader embedded at a Global Consumer & Enterprise Networking Company, Jay reports directly to the CIO and Head of Security with full ownership of the enterprise security program — covering detection, incident response, vulnerability management, cloud security, GRC, and third-party risk across a 7,000-asset hybrid AWS environment.

Program Scope

7,000+ assets, AWS & hybrid environment, 15-person team, managed SOC, MDR & security tooling vendors

Detection Engineering

150+ detections mapped, 200+ rules authored, 40% alert noise reduction, 30% fewer false positives

Telemetry at Scale

30+ ingestion sources — AWS, endpoints, identity, network — processing 800M–1B+ events per day

Incident Response

40+ standardized playbooks covering the full incident lifecycle, validated by red team and purple team operations

Key Achievements at UltraViolet Cyber

Across six years as Senior Director, Jay has driven measurable improvements across every dimension of the security program — from detection fidelity and response speed to cloud security, vendor accountability, and executive visibility.

Zero Trust Architecture

Designed and implemented Zero Trust across identity, network, and cloud — reducing lateral movement risk, locking down remote access for employees and contractors, and cutting the attack surface across on-premises and cloud environments.

Cloud & Container Security

Built and maintained cloud security for AWS and GCP — CSPM, IAM governance, workload protection — reducing cloud-related incidents by **42% in the first year**.

Vulnerability Management

Reduced the vulnerability remediation backlog by **40% within six months** by implementing risk-based prioritization workflows and shifting the team away from equal-priority patching toward exposure-driven triage.

Budget & Vendor Management

Managed a **\$1.5M annual security tooling budget**, consolidating 6 overlapping platforms and reallocating spend to close detection gaps — improving coverage without increasing overall program cost.

AI Security Governance

Maintained one of the first enterprise AI security governance frameworks covering **20+ AI tools** in active use — including risk assessment, policy guardrails, data handling standards, and AI-specific incident playbooks.

Executive Reporting

Delivered security dashboards, QBRs, MBRs, and OKR reviews to the CIO and Head of Security — connecting detection performance, incident trends, and risk exposure to actionable leadership insights.

Impact by the Numbers

Jay's leadership is defined by quantifiable outcomes across detection speed, response efficiency, risk reduction, and program scale.

85%+

MITRE ATT&CK Coverage

Across a 7,000-asset hybrid environment

4h

MTTD Achieved

Reduced from over 24 hours

3h

MTTR Achieved

Reduced from over 8 hours

200+

Detection Rules

Authored across SIEM and XDR platforms

1B+

Events/Day

Processed across 30+ telemetry sources

500+

Vendor Assessments

Completed annually through TPRM program

Earlier Career: Building Security Programs at Scale

Senior Manager, Security Operations

UltraViolet Cyber (METMOX) · Mar 2013 – Sep 2019 · Hyderabad, India

Built and led SOC programs for 8+ enterprise clients, standing up 24/7 detection and response from scratch. Grew the security team from **5 to 145 people** — a scale of growth that directly contributed to the company's acquisition. Drove client vulnerability backlogs down by **55% on average within 90 days** through risk-based triage. Defined security policies against NIST, ISO 27001, and CIS Controls. Led M&A security due diligence for a major acquisition and presented quarterly security reviews to C-suite stakeholders at each client.

1

2

Team Lead, Incident Management

Verizon Business (via Magna Infotech) · Apr 2012 – Mar 2013 · Mumbai, India

Built the SOC at one of India's largest financial institutions from nothing — deployed the SIEM, wrote **100+ detection rules**, and got the team operational in under 5 months. Led a 6-member team, cut average investigation time by **60%**, and brought MTTR down from 4+ hours to under 90 minutes through triage automation. Produced regular security posture reports for senior leadership using QRadar and Secureworks Taegis.

3

Co-Founder & Security Architect

Super Computers Trading Est · Sep 2011 – Apr 2012 · Abu Dhabi, UAE

Co-founded a security consultancy in Abu Dhabi serving enterprise clients across the Middle East on SIEM deployments, network security, and infrastructure projects. Scaled the company from **4 to 20 people**, contributing to conditions that led to its acquisition. Delivered SIEM solutions, VPN design, firewall configuration, vulnerability assessments, penetration tests, and security awareness programs.

4

Assistant Manager, Information Security

Geojit Financial Services · Feb 2007 – Sep 2011 · Cochin, India

Built the IT security division and SOC from scratch, covering **590 branch offices** and cutting incident response time by 30%. Set up and ran firewall, IPS, and network segmentation across all branches — reducing network-level incidents by 40% and maintaining zero major perimeter breaches over four years. Owned disaster recovery for trading platforms and customer-facing financial systems.

Core Competencies

Jay's expertise spans the full spectrum of modern enterprise security — from hands-on detection engineering and cloud architecture to executive program leadership and regulatory compliance.

Security Operations

- SIEM/XDR Operations & Detection Engineering
- MITRE ATT&CK Mapping & Threat Hunting
- Threat Intelligence & Security Automation
- Vulnerability Management

Architecture & Engineering

- Zero Trust Architecture
- Cloud Security (AWS, GCP, Azure)
- Identity & Access Management
- Endpoint & Network Security

Risk & Compliance

- GRC: NIST, ISO 27001, CIS, PCI, SOX
- Third-Party Risk Management (TPRM)
- M&A Security Due Diligence
- Vendor Risk Assessment

Leadership & Program Management

- Team Building & Scaling
- Executive Reporting & OKR Reviews
- Security Strategy & Roadmap Planning
- Budget Management (\$1.5M+)

Technology & Platform Expertise

Jay has hands-on experience across a broad and modern security technology stack — spanning detection and response, cloud security, identity, vulnerability management, threat intelligence, and GRC platforms.

Detection, Response & SIEM

CrowdStrike Falcon, Microsoft Sentinel, Splunk, Secureworks Taegis, Hunters, Palo Alto Cortex XSOAR, ArcSight, QRadar, LogRhythm, Carbon Black, SentinelOne, Microsoft Defender for Office 365, Trend Micro, Elastic Stack

Cloud & Infrastructure

AWS, GCP, Azure, Wiz, Zscaler ZIA/ZPA, Docker, Cisco Firepower, Fortinet, Check Point

Identity & Access

CyberArk, Okta, Azure AD/Entra ID, Ping Identity

Vulnerability & Risk

Tenable, Qualys, Rapid7, BitSight, Security Scorecard, Veracode, ServiceNow GRC

Threat Intelligence

Recorded Future, Anomali, ThreatConnect

Email & Productivity Security

Proofpoint, Microsoft Defender for Office 365

Certifications & Education

Certifications

CEH

Certified Ethical Hacker · EC-Council, 2011

ECSA

EC-Council Certified Security Analyst · EC-Council, 2011

Qualys

Certified Specialist — Vulnerability Management & Policy Compliance, 2019

RHCT

RedHat Certified Technician · Red Hat, 2006

CISSP — Exam Scheduled Q3 2026. Actively preparing for the industry's most recognized security leadership credential.

Education

Master of Business Administration (MBA)

IT & Human Resources
National Institute of Management
Feb 2007 – Feb 2008

Graduate Diploma, Business Administration

National Institute of Management
Jun 2005 – Apr 2007

Jay's MBA background in IT and Human Resources directly informs his ability to lead large security teams, manage cross-functional stakeholders, and communicate risk in business terms to C-suite and board-level audiences.

Let's Connect

Jayakrishnan is open to senior security leadership opportunities, advisory engagements, and strategic conversations about enterprise security program development, detection engineering, and AI security governance.
